

XEDAMATE-60

COMPOSITION

Active ingredient : chlorpropham (CIPC), 634 g per litre

USES : sprouting inhibitor

CULTURES : potatoes

DESCRIPTION

- XEDAMATE-60 is a post-harvest chemical
- XEDAMATE-60 is used for the treatment in cold storage
- XEDAMATE-60 is highly concentrated in active ingredient for :
 - A very fast treatment,
 - A minimum amounts of inerts on the potatoes.

IMPLEMENTATION

- XEDAMATE-60 is applied by thermofogging through XEDA's electrofog®.
- The XEDA's electrofog® assures a perfect coating of the treated tubers and a precise control of the applied amount in the respect of the authorised residue level.
- XEDAMATE-60 is used in multiple applications for the longest conservations within the limit of 36g of active ingredient per ton potatoes.

INSTRUCTIONS FOR USE
